MANISH SRIVASTAVA

Senior Java Backend Developer | 5 Years Experience

Gurugram, India • +91-8318241519 • manish.sri9559@gmail.com

LinkedIn: linkedin.com/in/manish-srivastava-b564701a7 • GitHub: github.com/Manish6298 • Portfolio: manish6298.github.io

PROFESSIONAL SUMMARY

Results-driven Java Backend Developer with 5 years of experience at Tata Consultancy Services, delivering scalable, high-performance enterprise applications across telecom and automotive domains. Proficient in Java 8, Java 17, and Java 21, Spring Boot, Microservices architecture, RESTful API design, and cloud platforms including AWS and Kubernetes. Experienced in AI-assisted development using Amazon Q and KIRO IDE for unit test generation, cognitive complexity reduction, and OOM resolution. Adept at CI/CD pipeline management, Agile delivery, production debugging, and end-to-end SDLC. Recognized for on-time delivery, client appreciation, and proactive performance optimization in high-load production environments.

TECHNICAL SKILLS

Languages: Java 8, Java 17, Java 21

Frameworks & APIs: Spring Boot, Spring MVC, Spring Security, REST API, Microservices, FTL (Free Marker)

AI-Assisted Dev Tools: Amazon Q (unit test generation, code analysis), KIRO IDE (AI-powered performance optimization, MCP server integration)

Cloud & DevOps: AWS (EC2, S3), Kubernetes, Jenkins, GitLab CI/CD

Databases: MySQL, Redis Caching

Testing & Quality: JUnit, JMeter, Postman, SonarQube, SOAP UI, Load Testing, Test Case Design

Logging & Monitoring: SLF4J, Log4j2, Dynatrace

Tools & Practices: Git, GitLab, Confluence, Agile Methodology, Root Cause Analysis, Code Review

PROFESSIONAL EXPERIENCE

System Engineer | Tata Consultancy Services (TCS) | Gurugram, India

June 2021 – Present (5 Years)

Project: Avis Budget Group — Global Backend Platform | *Jul 2025 – Present*

- Configured and integrated MCP (Model Context Protocol) servers within KIRO IDE to connect directly with JIRA — enabling real-time fetching of ticket updates, comments, and acceptance criteria without leaving the development environment, significantly reducing context-switching overhead.
- Leveraged KIRO IDE's MCP-powered codebase analysis to trace root causes of complex production bugs by correlating JIRA issue descriptions with specific code paths, accelerating defect resolution turnaround.
- Utilized KIRO IDE to systematically diagnose and resolve Out-of-Memory (OOM) issues in production, analyzing heap dumps and memory profiles to eliminate recurrent incidents and improve application stability.
- Optimized backend application performance by identifying memory retention issues in large collection processing, reducing heap consumption and preventing production outages.
- Implemented Redis caching (cache-aside pattern, TTL configuration) to reduce database load and improve API response times on high-traffic endpoints.
- Designed and implemented global exception handling using @ControllerAdvice and @ExceptionHandler in Spring Boot, returning structured error responses with appropriate HTTP status codes and user-friendly error messages across all REST APIs.
- Configured connection and read timeout values for external service integrations, ensuring graceful degradation — on timeout, the system returns a defined error code and meaningful error message to the client instead of hanging or crashing.
- Collaborated with cross-functional international teams in Agile sprints, contributing to sprint planning, daily standups, and retrospectives for on-time delivery.

Project: British Telecom (BT) — Enterprise Backend System | *Jun 2021 – Jul 2025*

- Designed and developed scalable backend services and REST APIs using Java and Spring Boot for British Telecom, reducing development cycle time by 20% and improving system performance by 15%.
- Integrated microservices using TDA architecture, managing end-to-end SDLC phases to ensure timely delivery aligned with Business Agile standards.
- Integrated Amazon Q (AWS AI coding assistant) to auto-generate JUnit test cases, significantly accelerating test coverage and reducing manual testing effort across the codebase.
- Used Amazon Q to identify and eliminate cognitive complexities in legacy code, improving maintainability scores and reducing code review cycles.
- Deployed and managed applications on AWS, automating build and deployment workflows using Jenkins and GitLab CI/CD pipelines for zero-downtime releases.
- Performed load testing using JMeter and Postman Runner to identify performance bottlenecks and optimize API response times under high-traffic conditions.
- Implemented structured application logging using SLF4J and Log4j2 across microservices; configured environment-specific log levels (ERROR in production, DEBUG in pre-production) to balance observability with performance, directly aiding root cause analysis of production incidents.
- Optimized incident resolution and debugging processes, reducing production response times by 30% through structured root cause analysis and systematic debugging.
- Maintained full project transparency through detailed documentation on Confluence; collaborated with cross-functional teams including business analysts and QA engineers.
- Successfully migrated the application to Spring Web MVC (latest version) and JDK 21, ensuring seamless deployment and testing — received formal client appreciation for delivery quality.
- Mentored junior engineers on Java best practices, REST API design patterns, and Agile workflows, fostering a collaborative and high-performance team culture.

Software Development Intern | **PrintIndiaMart** | New Delhi, India

January 2021 – May 2021

- Developed a full-featured e-commerce mobile application using Flutter and Dart, enhancing user experience and engagement on the platform.
- Implemented OAuth 2.0 for secure REST API integration, ensuring authenticated data transmission and user authorization across all application endpoints.
- Managed system integrations ensuring compatibility with existing infrastructure and collaborated with the development team to improve overall system reliability.

KEY ACHIEVEMENTS

- **Client Recognition — Successfully led migration to Spring Web MVC and JDK 21 with zero downtime, earning formal client appreciation for exceptional delivery quality.:** Spring Web MVC & JDK 21 Migration
- **Received appreciation from the TCS R&D team for completing a key AI/ML learning milestone, demonstrating proactive upskilling in Generative AI and emerging technologies.:** TCS R&D Recognition
- **Reduced production incident response time by 30% through structured debugging and root cause analysis across the British Telecom backend platform.:** Performance & Reliability

EDUCATION

Bachelor of Technology (B.Tech), Computer Science & Engineering

Sikkim Manipal Institute of Technology, Majitar, Sikkim

Graduated: May 2021 • CGPA: 7.6 / 10

CERTIFICATIONS

- Technology: Generative AI Foundation Curriculum — TCS iEvolve (Feb 2024, Cert ID: 22326)
- Digital: AWS Cloud Computing Intermediate — TCS iEvolve (Jan 2025, Cert ID: 9325)

LANGUAGES

Hindi: Native • **English:** Professional Proficiency (C2)
